Alley way bowling center

Michelle Alvarado
St. Mary's University, USA

In my computer graphic class, I had to create a company I would like to own one day. I created a Bowling Center. I have been around bowling all my life so I thought it would be fun to make up my own center. What comes to mind when you think of bowling? You may think of a ball or pins. I think of the lane or as I like to call it the alley. I used this image to create my company named Alley Way Bowling Center. Alley Way Bowling Center is a family friendly environment. Customers can come bowl or just enjoy our Mexican restaurant, bar, and game room. Our game room contains an area to play Wii bowling, a popular video game. This bowling center, compared to others will be more engulfed in technology. It contains top of the line equipment and free Wi-Fi throughout the center. Our conference room is full of technology from a smart board to a projector. We have flat screen televisions so they keep up with the customer's favorite sports. We also want people to have parties, company meetings, or social events at our center. The theme of the center is an alleyway so my website reflects the theme. When I think of an alleyway I think of stone walls, painting on walls, and graffiti. I created my website to show this image. It contains brick wall backgrounds and graffiti text. Some images also appear as a picture painting on a wall. I want to think of an alleyway when they see the site. My web pages contain unique buttons that link to the accompanying web pages. My website is unique and that is what I want people to see when they visit my site because Alley Way Bowling Center is a unique place.

Biography

Michelle Alvarado received a BA in Mathematics with a minor in Computer Science from St. Mary University. She is working on her Master in Educational Leadership.
