October 05-06, 2018 | Los Angeles, USA

Regenerative medicine: The future of medicine is here

Kristin Comella
US Stem Cell, USA

Regenerative medicine is a revolutionary approach to treating many degenerative conditions and includes a variety of different techniques including stem cell therapy. Harnessing your body's own healing potential will obsolete many current techniques of surgery and pharmaceuticals. Regenerative therapies are being explored as a treatment for a variety of degenerative diseases and injuries. Treatments can be easily administered by physicians in an outpatient procedure. We have treated over 7000 patients with a strong safety and efficacy profile. Learn about the advantages of restoring normal tissue function by changing the course of aging and degenerative diseases. The future of medicine is here!
