Green drop program: We conserve the nature

Sajid Rana

Help2Help, Pakistan

Green drop program by Help4help is a suite of tools enabling adaptive management on fuel oil usage and environment conservation. Help4help Organization with special consultative status with ECOSOC since 2015. Industries are the backbone of the country and combustion (burning fuel) is utmost necessary to run an industry in Pakistan, some industries use organic fuel like tires, coal, and carbon materials. Which cause high pollution. We as NGO convince these industries to use a substitute for using carbon materials. Our focus is to provide environmental information on conservation technology. We provide fuel oil storage tanks all necessary facilities to convert their industries to fuel oil. Combustion of organic fuel is a high-temperature exothermic redox chemical reaction between a fuel and an oxidant release poisonous gases like Carbon dioxide, and Sulphur dioxide which result in an adverse reaction on eyes, skin and especially on lungs of children. That's why the use of oil is safe and sound. We visited 50 steel industries and succeed 17 steel industries to convert on fuel oil. We provide to 7 steel industries fuel oil storage tanks on low rate installments. Still, we are negotiating with remaining 33 steel industries to switch over to fuel oil. The main objectives of this study are (a) To minimize Air pollution. (b) To provide awareness among industrialists and common people regarding the use of fuel oil and substitutes which are safe for health. (c) We are committed to creating change for a better future of our next generation. (d) We aim at lowering the carbon-dioxide and Sulphur dioxide level in the atmosphere which causes depletion of Ozone Layer. (e) We want to spread our green program all over Pakistan as well as to convey our message internationally. We need volunteers sincere with humanity who gives hand to hand with us to reduce Air pollution and a large team of marketing experts. We provide free of coast converters and fuel oil storage tanks on nominal installments.

Biography

Help4help NGO was founded in 2011 by Chairman Sajid Rana and President NICOLE Arslan to help improve lives of children and infants in Pakistan. More than 5.5 million children in Pakistan are not going to school. Many are even deprived of basic necessities such as food and water due to extreme poverty or natural calamities. Help4help is working towards making a change that stays. The mission is to provide these children with an education, a healthy lifestyle and help give them an opportunity at a better life. Green Drop program by Help4help is a suite of tools enabling adoptive management on fuel oil usage and environment conservation. Help4help Organization with special consultative status with ECOSOC since 2015.
