

3rd International Conference on **Biodiversity & Sustainable Energy Development**

June 24-26, 2014 Valencia Conference Centre, Valencia, Spain

Save the planet-promoting food security, water conservation & preservation of endangered animals

Gillian Gaspard

GHG Global Powerhouse, Trinidad and Tobago

Due to global warming and climate change, we are currently facing many environmental challenges today, including very unpredictable weather conditions and we have noticed an increase in flooding globally. Also due to industrialization and growing populations, we are also faced with more water and atmospheric pollution and water shortage, hence the need for water pollution and water conservation awareness also. Additionally with rising inflation and an increase in food prices globally, there is a need for more education about proper agricultural practices and encouraging people to start their own kitchen gardens to promote food security and prevent food loss and food waste. Not forgetting due to increased industrialization, lots of animal habitats have also been destroyed and many animals are now becoming extinct. There is a need to educate about preserving animal habitats and preserving endangered species for future generations as well.

Biography

Gillian Gaspard is the BIO-Owner and Founder of the small business called "GHG GLOBAL POWERHOUSE" (from Trinidad and Tobago). She has over 10 years experience in nursing and healthcare, also with lots of skills in various business disciplines and very passionate about protection of the environment and a better world for all.
