

# 5<sup>TH</sup> WORLD BIOENERGY CONGRESS

April 15-16, 2019 | Tokyo, Japan

## Water use as fuel (HHO) low carbon technology & water as use HHO's gas (molecular hydrogen/oxygen) as a preventive and therapeutic medical gas: Initiation, development and potential of hydrogen medicine

Muhammad Shoaib Hashmi

HHO Power Development & Aeronautics, Pakistan

Outdoor air pollution is a leading cause of early death, chronic disease, and disability. Motor vehicles are a major contributor to outdoor air pollution, exposing vulnerable population to especially high levels of harmful emissions in urban areas and near major roadways. Fine particles or particulate matter with a diameter of 2.5 micrometers or less (PM 2.5), are among the most harmful vehicle pollutants and are associated with a range of health impacts including cardiovascular and respiratory diseases, lung cancer, and infant mortality. Using gasoline and diesel as transport fuel causes emissions of both greenhouse gases, driving climate change, and of other air pollutants that are dangerous to human health and the natural environment. To prevent destructive climate change and reduce health impacts, the sector needs to move towards fuel that a lower carbon footprint and reduced emissions of sulfur and other conventional pollutants. Low Carbon Technology called Hydrogen on demand or water as fuel (HHO) Technology successfully reduces emission up to 50% and increase fuel efficiency up to 40%. It work equally well with Gasoline and Diesel fuel and recurring cost is almost zero. When HHO's gas is as a torch fuel gas, it can weld virtually any material including glass, quartz, ceramic, brick, copper, aluminum, and cast iron, It fuse dissimilar compounds like brick to iron and brass to glass. It can vaporize carbide, diamonds, and tungsten! HHO's gas cut steel much cheaper, faster and cleaner than oxygen – acetylene (oxy/acet) torch, or LPG – oxygen torch.

HHO Power is proud to announce the fully automated industrial efficient fuel burning system (EFBS) achieving up to 10 to 40% saving on the following fuels:- 1-coal, 2-HFO, 3-deisel, 4-biomass, 5-bagas, 6-natural gas / LNG/ LPG etc. 7-rice husk, 8-corn cob, 9=wood. Say hello to fuel saving and good bye to pollution and smog. The present invention relates to a new use of HHO's gas, and more particularly, to the use of HHO's gas for the treatment of diseases in mammals and a HHO's gas supply apparatus therefor. Hydrogen is the main element of the human body, but also plays an important role in the proper functioning of the human biological functions. Since the hydrogen molecule has all the elements of the strongest antioxidant capacity, can remove harmful reactive oxygen free radical, anti-inflammation and promote cell growth and cell repair ability, can promote metabolism, improve or even cure generic drugs difficult to treat disease, so has a great impact on human health. The following are examples of clinical cancer, cardiovascular disease, anemia, diabetes, stroke, Alzheimer's disease, Parkinson's disease, Tourette's disease, hepatitis, cirrhosis, lung damage, asthma, autoimmune diseases, systemic lupus erythematosus, inflammatory bowel disease, acute pancreatitis, subarachnoid hemorrhage, deafness, radiation injury, dermatitis, bedsores, drug intoxication, sexual dysfunction, organ transplantation injury, multiple organ failure, septic shock etc. and so on.
