Ethical conception towards prevention the hepatitis by vaccination

Olga I Kubar

Saint Petersburg Pasteur Institute, Russia

Current condition and predicted success of prevention Hepatitis besides the objective factors connected with the achievements in effective and safe vaccines development, directly depends on the society adherence to vaccination acceptance and realization. The goal of the study is to show the correlation between the trust of civil society and adaptation the vaccination and the following universal ethical principals on each stage of vaccines development and use. The research bases on the real examples from vaccination Hepatitis history and the analysis of significance and ethical conflicts occurring within the vaccine development and use course to identify the exact reasons capable to provoke the development of anti-vaccination movement. During the stage of R&D vaccines most important could foolowing the principals of scientific honesty and social expediency. At the stage of vaccines production and distribution such ethical principales, as justice, nondiscrimination, and the equal acceptance are most important. During the vaccination

process the openness and overcoming of the conflict of interests stand on the first place. To form the society adherence to vaccination it is necessary to create an open information field between the persons responsible for vaccination and the society. Harmonization and solidarity of all persons and bodies involved in the process of prevention Hepatitis within local, national, regional, and global levels are characterized by a specific significance ethical principles balance. At present time it is especially important for elementation of Hepatitis B as a key goal of WHO. There is underlined a close correlation between the conformity of the ethical principles to the course of general vaccination cycle and vulnerability concerning anti-vaccination lobby arguments and actions. In general the study provides some search and maintenance of balance of ethical standards and formation of partnership and interaction with a society to achieve the optimum results in protection against Hepatitis by vaccination.
