

INTERNATIONAL CONFERENCE ON

# DENTISTRY AND INTEGRATED MEDICINE

MAY 07-08, 2018 TOKYO, JAPAN

## Studies on several systemic disorders conceivably caused by oral cavity

**Emi Okuda**

Emi Dental Clinic, Japan

In the long history of dental treatments, the main objectives have always been to develop functionality and aesthetic aspects and treatments have focused on oral cavity only. However, while treating patients by taking into account their entire body condition, the following findings were made: Impact of amalgam and resin fillings, gold-silver-palladium alloy and metal-related skin allergies and development of an electromagnetic hypersensitivity (EMS) due to those dental fillings acting like an antenna, links between periodontal disease and diabetes, peri-apical lesion/infection and auto-immune disease, occlusion and headache, lower back pain, neck pain, knee pain and walking difficulties and cerebral disease triggered by over stimulation of periodontal membrane due to occlusal pressure. Therefore, dentists should carefully consider the effects of dental treatments on the entire body of their patients.

### Biography

From 2002, studies dental treatment taking into account the whole body under Professor Yoshiro Fujii. In 2005 opens the "Emi Dental Clinic" in Kobe Japan. Treatment of headaches, incurable lower back pains, Electro Magnetic Sensitive Syndrome, Chronic Fatigue Syndrome, Autoimmune Disease, Dementia. In 2011, relocates "Emi Dental Clinic" to Tokyo Japan. Becomes the President of the Association for "Thinking the connection between dental occlusion and the whole body". Educates dental surgeons about how to treat occlusal adjustment by a few microns, while giving conferences and seminars. Writes articles about the importance of the connection between the whole body and the oral cavity. Actively promotes the evolution of a medical care system based on fragmented medical acts towards a comprehensive cooperation between medical doctors and dentists.
