16ᵗʰ International Conference on

Modern Dental Health & Treatment

September 21-22, 2018 | Philadelphia, USA

Comparing the quality of life of patients requesting dental implants before and after implant

Rajat Sachdeva
Sachdeva's Dental Institute of Dental Science, India

Tooth loss/ Missing tooth for any amount of time can be a distressing experience. Not only can missing teeth ruin an otherwise perfect smile, they also hamper everyday important functions like eating and speaking. They can also seriously affect one's confidence. Replacing a missing tooth is more than just about appearances. It's about improving the quality of life associated with everyday activities like talking, eating, smiling. Dental Implants is a life-changing solution to these missing teeth. Dental Implants do not just fill the gaps created by missing teeth, they build an entire Smile. Implants function just like real/natural teeth. The difference before and after Dental Implant placement was significant. There was no more sticking to only soft foods, patients had a clearer speech. Patients had no inhibitions about talking and smiling. Patients were more confident in showing their teeth whereas earlier they faced immense embarrassment and discomfort. Overall communicating was alluring again! This is because not only do Implants look more realistic, they also fit so comfortably in the mouth. Its often we get to hear from our implant patients that the replaced teeth are better than the original and they forget they weren't real. Before and After Dental Implant Photos. The transformative affects Dental Implant can be seen in the before and after photographs. As with all Dental Implant patients, we take photos of their teeth and smile at the time of consultation. Once the treatment is concluded a new set of pictures are taken. Through these photos, it is not difficult to decipher the incredible difference Dental Implant has made to the patient's smile. A dental implant was used to replace the maxillary incisors.
