

International Conference on

NURSING EDUCATION & PRACTICE

November 26-27, 2018 | Las Vegas, USA

Muhammad Wasif Rashid Chaudhary

Via Medica International Healthcare, UAE

Risk factor in nursing and healthcare professionals

Healthcare provider's role to prevent and control infections in healthcare facilities by using advance strategies and to decrease transmission of infectious diseases from healthcare workers to patients and vice versa is very crucial. We will understand why Hand hygiene, Isolation, standard Precautions and correct use of personal protective equipment (PPE) during the patient care are important, to reduce healthcare associated infections and Occupational health hazards. We shall share Quality improvement methodologies (FOCUS-PDCA

& FMEA) and importance of implementations in healthcare facilities. We shall discuss about post exposure Interventions to infectious disease in healthcare field and how to prevent and treat employee and also share guidelines for work restrictions to employees suffering from infectious diseases like Meningococcal meningitis, HAV, HBV, HCV, HIV, MDRO, RSV, Varicella, TB and Influenza. According to Centers for disease control and prevention (CDC), results of a project known as the HAI Prevalence Survey (2014 Data) were published in 2016.
