Assessment of nurse knowledge about Glasgow Coma Scale at Al Dhafra hospitals

Ahmed Ayoub
Al Dhafra Hospitals, UAE

The most important assessment in the neurological examination is to assess the level of consciousness (LOC), which is considered as the first step in neurological examination. Detecting the changes in level of consciousness depends on the accuracy of nursing assessment. The nurses should be knowledgeable, confident, and quick in performing this task. The purpose of this study is to assess UAE nurses' knowledge about GCS working in Al Dhafra Hospitals, Abu Dhabi, United Arab Emirates. This study was carried out in the Dhafra hospitals, Abu Dhabi, United Arab Emirates in April 2018. It is a cross-sectional, descriptive study. Eighty-five nurses met the inclusion criteria, the survey was sent to 165 nurses (Respondent rate 51%). Data collection was carried out using a survey monkey instrument called "Glasgow Coma Scale". Data coding, entry and analysis has been conducted using SPSS 20 software. The differences have been tested at 95% level of significance, and the difference that has P-value < 0.05

was considered significant. The study revealed that the knowledge percentages mean of correct answers about GCS is 56.1 % {SD: ± 11.7 ; 95% CI: [26.67-100]}. On the other hand, it revealed also that the percentages of nurses who have a good knowledge about GCS were 50.6% and staffs whom have poor knowledge were 49.4 %. Moreover, the results revealed significant relation between gender and GCS training with level of GCS knowledge. The present study showed that the nurses in Al-Dhafra hospitals reflect inadequate knowledge. This finding raises concerns about the importance of knowledge and skill in assessing GCS. Continuing education and practice on the use of the GCS tool are important. A Brochure and booklet should be designated and distributed to all nurses who working in critical care units and dealing with an unconscious patient. Specific and advanced courses about GCS should be conducted in Al-Dhafra hospitals.

Biography

It has been more than Nine years since Mr. Ahmed Ayoub have become an official healthcare provider. He finished his Bachelor's Degree from Philadelphia University in Jordan 2009. Eventually he proceed to Study Master's in Oncology Nursing from Hashemite University in 2013. He has an impressive work experience as a Senior Charge Nurse at King Hussein Cancer Center, Jordan in Medical/Surgical/VIP/OPD. He is currently working now in Al Dhafra Hospitals (Madinat Zayed Hospital) / SEHA United Arab Emirates as Outpatient Staff Nurse for more than two years. Mr. Ahmed Ayoub is a Champion of Nursing Research in Al Dhafra Hospitals and follows up around 9 hospitals.
