

Energy exchange particle X, between materials

Amr fawzy

Amrbooks Inc. Innovator, Egypt

The energy dynamics and all based science is focus mainly on one or two ways to understand the energy dynamics, but if we look to the universe which is the real yard of understanding the energy of molecules and molecules transformation , we will finds missed factor in the balance and dynamism of such different powers to stabilize and making balance in the level of any material stability , this research door is new Hypothesis and theory to start the real understanding for the universe basic material and core material dynamism.

The active material which changes the charge of any other material and lead it to change in its atomic balance to perform certain dynamics and the reaction will depend on the speed of the energy particles carrier whatever its electrons, quark, or others which is proposed particle X.

Particle x is new proposition of energy particles yielded under condition from the cold dark materials between galaxies , and they able to exchange energy between other Universe materials to settle the balance and new elements formation.

Biography

Amr Fawzy is expertise in many fields innovator, book author and has 24 years experiences in healthcare sector. He has an application in Nobel 2022. Setting many applied theory regarding the way that pyramids was arise, has copyright for more than 20 books on Amazon, expertise in physics and life science.
