Face lift combined with simultaneous T.C.A 35% and coe laser peel

The combination of facelift and laser or T.C.A 35% peel is controversial procedure and is believed to cause high rate of complication

Objective: This study will show the benefits of this procedure in eliminating spots wrinkles and pigmentation during face lift without increasing the complication rate of face lift.

Patients: More than 300 patients were operated on between the ages of 50y – 70y all with S.M.A.S plication and T.C.A peel at the same time, at the end of the operation.

End Result: it's safe and saves time for the patient.

Conclusion: The combination of face lift and T.C.A peel does not cause an increase in skin loss or wound healing repair.
