GPT-X, is it really worth it?

Sebastiano Galazzo
Sistem-evo, Italy

GPT is the state of the art for NLP and NLG. People go crazy in front of the performances. No doubt they impress with their game well controlled. Is all that glitters really gold? An objective analysis of GPT algorithms to discover together how they work under the hood, their strengths, weaknesses, and costs in real life.

Biography

Sebastiano Galazzo is an artificial intelligence researcher. Winner of two AI awards, he has been working in AI and machine learning for 20 years, designing and developing AI and computer graphic algorithms. Very passionate about AI, interested in technologies focused on image and natural language processing, and predictive analysis. He received several national and international awards that recognize his work and contributions in these areas.
