How to manage a case of hot orbit?

Mohamed A Eldesouky

Tanta University, Egypt

Hot orbit is a term applied to a group of orbital disorders presented with the cardinal manifestations of inflammations as pain, redness, hotness and impaired ocular motility. This group of orbital disorders which varies from trivial as orbital hematoma to a very severe and sometimes life threatening disorders as orbital metastasis and

fungal orbital infections. In this study we describe our protocol in Tanta University Hospital Ophthalmology Dep. Tanta Egypt, for how to manage a case of hot orbit. In this study we present a tentative novel classification of hot orbit basically into infectious, non-infectious and mascaeraed groups.
