## Mashaeh Al-Namaeh O.D., M.S., Ph.D., FAO, Dipl ABO

<sup>1</sup>TelaSight Inc Consultant, Louisville, USA.

<sup>2</sup>Adjunct Prof: Oulu Applied Health Sciences, Finland

### Ocular Manifestations of Parkinson's Disease

This course will discuss the latest view of Parkinson's disease. Parkinson's disease (PD) is the second most common neurodegenerative disorder in the world. Visual manifestations can be due to pathology and/or treatments of Parkinson's Disease. Ocular manifestations such as visual hallucinations, dry eye syndrome, glaucoma, convergence insufficiency, diplopia and contrast sensitivity, will be discussed (Published in peer-reviewed Journal). Visual hallucinations occur in at least 25% of PD patients. A review on the ocular manifestations of PD and the evaluation of the current biomarkers such as OCTs for the early diagnosis and monitoring of PD will be discussed this presentation. (Published in peer-reviewed Journal)

**Keywords:** Parkinson's Disease; Eye movement; Ocular manifestations; Biomarkers.
