

International Conference on

# ORTHOPEDICS & ADVANCED CARE

September 24-25, 2018 | Dubai, UAE

## *Safwat Mohammed El Hoseny*

Al Qasimi &amp; Al Kuwait Hospitals, UAE

### Revolutionary treatment of difficult extremities wounds

The dressings serve to help close chronic wounds and thereby to reduce pain and prevent the loss of fluid, heat, protein, electrolytes and restore the function. Also the advanced scaffold and growth factors dressing as epidermal growth factor (Heberprot) can prepare it for surgical or

closure of difficult wounds . The recovery process will depend on the material of the dressing patient's age and any pre-existing medical conditions. Patient selection, timely reconstruction and optimal procedure are the criteria for lower limb reconstructive surgery.
