Rupture of renal angiomyolipoma during pregnancy: A case report

Amer M Gharaibeh, Rami Shwayat, Ehab S Rayyan, Firas Hammouri, Maram A Almaghariz
Jordanian Royal Medical Services, Jordan

Renal angiomyolipoma is an uncommon tumor that can be either sporadic or discovered together with tuberous sclerosis or pneumonic lymphangioleiomyomatosis. These tumors are hormone touchy and in this way will in general develop amid pregnancy and their principle difficulty is the danger of breakWe introduce the case of our patient, who delivered her baby at 33 weeks of gestation by Caesarean Section (CS) and underwent urgent nephrectomy due to ruptured AML.

Biography

Amer M.Gharaibeh is the Obs & Gyne Consultant of Jordanian Royal Medical Services.
