### **The influence of environmental aesthetic on the perception of respect for the psychiatric patient**

**Ivete Contieri Ferraz**

Veritas Clinic Curitiba, Brazil

**S**patial aesthetics in health settings remain a challenge due to the difficulty in balancing disease prevention, such as the aseptic and ergonomic protective needs of clinical hospital design, with health promotion through exposure to beauty. The objective of this work is to identify the importance of the aesthetics of the environment in the treatment of Mental Health, through bibliographic research of qualitative character using Pubmed and Scielo databases, between the years 1996 to 2018, with the key words: Design, Architecture, Art, Mental Health, Humanization, Psychiatry and Aesthetics. It is having as an indication that the aspects that make up the design were extremely important as

attributes of humanization because they produce belongingness, respect and specially dignity in the patient. The main variables influencing the aesthetic environment highlighted in this article are: light, sound, color, aroma, texture and shape. The design belongs to the aesthetic-artistic perspective, reinforces the protagonism of the sick human being in detriment of the disease, reinforces the expansion of the concept of care and enhances the patient's response to treatment. The conclusion reiterates that the multi-axial aspects brought about by the design of environments within hospitals, is in line with the Holistic model of Health, producing Health promotion and positive responses to patients.

#### **Biography**

Ivete Contieri Ferraz is a medical Psychiatrist, with expertise in clinical practice, with passion to improve the health and well-being of her patients. Her model of care, with an important technical foundation but open and contextual basis, it is quite divergent from the biomedical model. Based on the absolute protagonism of the human being, her model of care is a source of encouragement to understand the influence of multidisciplinary factors in the response to the patient's treatment, converging to a model similar to the Holistic of Health. She sediment this model in her clinical practice after 15 years of experience in hospital institutions, being currently in research, builds its theoretical foundation, seeking increasingly to understand pluralism in Health and the purification of the physician-patient relationship and its therapeutic function.
