Scientific Sessions:

Nursing Research

[Nursing Research](#) is a logical examination of an issue of significance to the field of Nursing. It is a methodical request intended to create reliable evidence about issues of significance to the nursing calling, including nursing

practice, instruction, organization, and informatics. It is fundamental for the improvement of exact information that empowers nurses to give evidence based consideration. The nursing calling is responsible for giving top notch, financially savvy care for patients and families.

Evidence Based Nursing (EBN)

[Evidence Based Nursing](#) (EBN) is an approach to manage settling on quality decisions and giving nursing care in perspective of individual clinical inclination in mix with the most rhythmic movement, pertinent research open on the point. This methodology is using Evidence Based Practice (EBP) as a foundation. EBN executes the most extraordinary systems for giving thought, which have been shown through examination of incredible examinations and authentically tremendous research disclosures. The target of EBN is to improve the prosperity and security of patients while in like manner giving thought in a fiscally astute manner to upgrade the outcomes for both the patient and the human administrations structure. EBN is a technique built up on the collection, comprehension, assessment, and mix of significant, clinically tremendous, and appropriate research.

Public Health Nursing

Globally, [public health](#) concerns from non-communicable diseases and environmental factors are increasing, and risk from communicable diseases is decreasing. In developing countries, the risk of communicable diseases still prevails. Nurses must play roles in both situations; in prevention and control of communicable diseases, as well as in addressing non-communicable diseases and environmental risk factors.

Surgical Nursing

[Surgical nurses](#) work in a components and testing condition making a key occupation in life-saving medical procedure and enveloping thought. Surgical nurses are the establishment of the careful group. Since ordinary commitments much of the time changes as demonstrated by their component of aptitude. A surgical nurse found around careful tables helping experts with both elective and life-saving procedures. These nurses help with a wide scope of errands beforehand, during, and after medical procedures, without surgical nurses, it would be for all intents and purposes outlandish for surgeons to complete their duties well.

Globally, 266.2 to 359.5 million operations were performed in 2012 alone, which is 38% higher than the previous years. The estimate is expected to increase in the upcoming years. This session discusses research, case reports and evidence obtained in planning, implementation and evaluation of treatment of the patient.

Emergency Nursing

The global incidence of trauma and [emergency medical](#) cases are on the rise, mainly due to road traffic accidents, violence, sudden illnesses, drowning and animal bites. Risks of natural and manmade disasters are also prevalent. Hence, the requirement for skilled emergency service nurses is also increasing. Nurses will need rapid assessment and decision-making skills, the requirements and research for which will be discussed in this session.

Reproductive Nursing

[Reproductive Nurses](#) direction and treat families, couples, and people for richness, origination, and different regions of generation. They likewise work with ladies experiencing menopause, showing them manifestations and treatment alternatives. For Reproductive Nurses, great relational abilities are an absolute necessity-not just in view of the affectability of their work, yet they likewise fill in as contacts between specialists, researchers, different nurses, and patients' families. As a reproductive nurse, you'll be on the cutting edges of therapeutic advances like undifferentiated organism Research.

Mental Health Nursing

One-fourth of the people in the world will be affected by mental health problems at some point in their lives. Still, two-thirds of people with a known mental disorder never seek medical attention. The stigma and discrimination surrounding mental health issues prevents people from seeking care. In this session, possible solutions for such stigma and the effects on psychiatric nurses themselves will be discussed.

Cancer Nursing

Despite tons of research and a \$147 billion drug market, cancer is still the second leading cause of death worldwide. The risk factors include dietary changes, environmental factors, lifestyle transitions, viral infections etc. [Nursing care](#) is required for the increasing number of patients and for creating awareness and prevention of dietary, lifestyle and occupational factors in reducing the risk of cancer.

A [Cancer and Tumor Nurse](#) offer thought to threat patients and those at peril for getting the illness. Oncology nurture is a nursing proficient who has practical experience in thinking about individuals with malignant growth. Oncology nurses regularly fill in as your first line of correspondence, and help arrange the numerous parts of your consideration all through malignant growth treatment. Clinical consequences and development nursing in perspective on the rates of torment and distinctive signs filed in the composition, changes in clinical practice are relied upon to decrease the reaction load of tenants with tumor. Enrolled nurses are key individuals from the human services group and assume vital jobs in cancer care including wellbeing advancement, malignant growth anticipation and screening, treatment and side effect the executives in intense, long haul, network and palliative consideration. Oncology nursing is a claim to fame practice which requires extra information and clinical abilities to help patients determined to have malignant growth and their families.

Geriatric and Palliative Nursing

According to WHO, every year, around 40 million people require palliative care, out of which 78% live in developing and underdeveloped countries. Only 14% people receive the palliative care they require. The need for palliative nursing is increasing, due to the rise in non-communicable diseases and the world's ageing population. Sub-standard training and lack of awareness of palliative care is prevalent among nurses, the solutions and opportunities for which will be discussed in this session.

Nursing Practice

[Nursing professionals](#) around the world are experiencing an array of changes as the healthcare industry is continuously

adapting more advanced technology and medical trends. Nurses adapt themselves to various fields of medicine and medical research, and many new fields of medical research require the assistance of nurses. Some of them are: Genetics Nursing, Stem-cell Technology Nursing, Fertility Nursing, Holistic Nursing, etc. This session covers such new fields and its requirements.
