The clinical solutions segment is predicted to expand at a CAGR of 20.4%, owing to

practice of various government initiatives and rising demand for HealthTech solutions in healthcare associations for cost cut in clinical forms such as electronic medical records, radiation dose management, vendor neutral archive, clinical decision support systems, laboratory information systems, medical image processing digital pathology solution and analysis systems.

Global Market Growth (2018 to 2025)

It goes on to list the highest adverse events, more and more capturing care supplier mind shares, current investment trends and forecast neutral interests. It additionally analyses the present competitive setting, most impactful merchandiser solutions addressing the highest patient questions of safety and their future market potential.

The study additionally highlights a number of the foremost innovative and promising solutions capable of disrupting the market similarly as convergence of recent technologies getting into the sector. It finally concludes with observing the highest five most compelling future growth opportunities, key methods for growth and implementation challenges.

### Importance & Scope:

Throughout the 21st century, the role of nurse has evolved significantly. Nurses work in a variety of settings, including the hospital, the classroom, the community health department, the business sector, home health care, and the laboratory. Although each role carries different responsibilities, the primary goal of a professional nurse remains the same: to be the client's advocate and provide optimal care on the basis of evidence obtained through research.

Nursing research provides the scientific basis and foundation for the nursing profession. Nursing research can be carried out in education, administration and clinical specialities. The major reason for conducting research is to expand the wealth of nursing knowledge to improve patient care and outcomes.

### Why to attend???

It will provide exposure to the possibilities in [Patient Safety](#) & Healthcare. Research is an important tool for the continual growth and development of a relevant body of knowledge in [Patient Safety & Healthcare](#). Research enables nurses to assess the need for an invention and also enable them to have an understanding of a particular [Patient Safety](#) situation. It will also provide insight to the novel inventions and techniques. It is very beneficial for

the students, physicians, nurses, doctors, health care people, professors because it provides knowledge in the field. It also gives opportunities to the nursing societies in Zurich to showcase their knowledge and have face to face meetings with scientists increasing their business opportunities. It also gives opportunity to know about their market competitors.

**Top Societies and Association Around the World:**

- [Philippine Nurses Association](#)
- [American Nurses Association](#)
- [Canadian Nurses Association](#)
- [Japanese Nursing Association](#)
- [Nursing Association](#)
- [Philippine Nurses Association of United Kingdom](#)
- [Nursing & Midwifery Council United](#)
