Conclusion:

Psychiatry 2020 will bring together experts like eminent scientists, senior/junior research fellows, professors, students, leading neurologist & psychiatrists, members of different psychiatric association, medicine and medical technology companies related to psychiatry and psychology from all over the world to share an interest in the field of psychiatry and psychology to discuss about the new concepts and research ideas with advancements in the field which is to be applied in near future for the well-being of humans. Development of new techniques of diagnosis, treatment and prevention has to be recognized which will imply a significant role on the lives of people. The scattered findings and researches regarding this topic will be given another priority as these are the stepping stones for the future. Based on 2010 data showed mental disorders as the largest cost driver at \$2.5 trillion in global costs in 2010 and projected costs of \$6 trillion by 2030. The U.S. National Institutes of Health's yearly budget is \$31 billion. Within that agency, the U.S. National Institute of Mental Health (NIMH) has an annual budget of \$1.4 billion. Health at a Glance: Europe 2018, released on November 22, says that mental health problems, such as depression, anxiety disorders and alcohol and drug use disorders, affect more than one in six people across the European Union in any given year. Besides the impact on people's well-being, the report estimates the total costs of mental ill-health at over EUR 600 billion – or more than 4% of GDP – across the 28 EU countries. A large part of these costs are due to lower employment rates and productivity of people with mental health issues (1.6% of GDP or EUR 260 billion) and greater spending on social security programmes (1.2% of GDP or EUR 170 billion), with the rest being direct spending on health care (1.3% of GDP or EUR 190 billion). The heavy burdens of mental illness on individuals and society are not inevitable, good policies and practices do exist and are in place in many European countries, but much more can still be done to promote and better manage mental health.
