

16th International Conference on Advance Material & Nanotechnology

Alireza Heidari

Director of the Bio Spectroscopy Core Research Laboratory at Faculty of Chemistry, California South University (CSU), Irvine, California, USA
E-mail: scholar.researcher.scientist@gmail.com

Announcement on Nanophotonics and Electronics

Market Analysis

Advance Material & Nanotechnology 2020 feels respected to welcome researchers' educators, exhibitors and student from all over the globe to show their magnificence on a typical stage. It involves enormous joy that International Conference on Advance Material & Nanotechnology will be hung on June 22-23, 2020, 2020 in Zurich, Switzerland.

The Organizing Committee is preparing for an energizing and enlightening gathering project including entire addresses, Symposia, Workshops on an assortment of points, Poster introductions and different projects for members from everywhere throughout the world. We welcome you to go along with us at the Advance Material 2020, where you will make certain to have a significant involvement with researchers from around the globe.

Overall Analysis

Advance Material & Nanotechnology is the study of all of the materials we see around us every day. Materials Science or Technology forms a bridge between the sciences and technology. It allows theory to be put into practice in a way which benefits everybody. Materials Scientists or Engineers look at all of the different groups of materials, metals and alloys, polymers, ceramics and composites. They develop new materials for new applications, improve existing materials to give improved performance and look at ways in which different materials can be used together.

The organizing committee is gearing up for an exciting and informative conference program this year also which includes plenary lectures, symposia, workshops on a variety of topics, poster presentations and various programs for participants from all over the world. We invite you to join us at the Advance Material & Nanotechnology 2020, where you will be sure to have a meaningful experience with scholars from around the world. All members of the Polymer Science organizing committee look forward to meeting you in Zurich, Switzerland.

Industrial scope

Technological development in the 21st century has become synonymous with advances in materials research. Advanced materials with exotic properties are now being used in numerous engineering and technological applications. Efficient renewable energy sources and energy storage systems, electronics and communication

devices, lighter and better alloys, drug delivery systems, magnets with superior properties are all a result of the advances in materials research. Hundreds of research groups all over the world are involved in synthesizing and characterizing novel materials for applications. Numerous industries are making use of these discoveries for novel applications. It has become almost impossible for researchers to keep track of the huge volume of research output in this field. Collaborative research involving different research groups linked to industries directed at achieving specific results has become the need of the hour. ICAMN 2020 aims to provide a common platform to network with researchers and technologists from different parts of the world and to present and publish original and novel results.

Zurich hosts all the primary institutions of the nation. Many international institutions are located in in the city, notably cultural and scientific ones – such as the British School, the American Institute, the Scandinavian Institutes, the French Academy, the German Archaeological Institute – for the honour of scholarship in the Eternal City, and Specialized Agencies of the United Nations.

Graphs depicting about use of Nanotechnology:

Global Opportunity Analysis and Industry Forecast, 2018–2025

The term nanotechnology describes a range of technologies performed on a nanometer scale with widespread applications in various industries. Nanotechnology encompasses the production and application of physical, chemical, and biological system at scales ranging from individual atoms or molecules to around 100 nanometers. Using nanotechnology, materials can effectively be made stronger, lighter, more durable, more reactive, more sieve-like, or better electrical conductors.

The global nanotechnology market is segmented on the basis of type, application, and region. Based on type, the market is bifurcated into nanodevices and nanosensors. Nanodevices is subsegmented into nanomanipulators, nanomechanical test instruments, nanoscale infrared spectrometers, and others. Nanosensor is further divided into optical nanosensor, biological nanosensor, chemical nanosensor, physical nanosensor, and others. By application, the market is fragmented into electronics, energy, chemical manufacturing, aerospace & defense, healthcare, and others. Region wise, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA along with their prominent countries.

KEY BENEFITS FOR STAKEHOLDERS

- This study includes the analytical depiction of the global nanotechnology along with the current trends and future estimations to determine the imminent investment pockets.
- The report presents information regarding the key drivers, restraints, and opportunities.
- The current market is quantitatively analyzed from 2018 to 2025 to highlight the financial competency of the industry.
- Porter's five forces analysis illustrates the potency of the buyers and suppliers in the industry.

Top Institutes in Europe

- University of Bristol Aeronautical Engineering
- Carleton University
- Royal Military College of Canada
- School of Mines of Albi-Carmaux
- Technical University of Berlin
- Helsinki University of Technology
- Technical University of Hamburg
- Technion - Israel Institute of Technology
- University of Zagreb
- University of Bologna
- Poznan University of Technology

Top Institutes in Asia

- Kyoto University
- Pohang University of Science And Technology (POSTECH)
- National Cheng Kung University
- University of Melbourne
- University of Queensland
- University of Auckland
- Victoria University of Wellington
- Yale University

- National Cheng Kung University
- Top Institutes in America
- Stanford University, California
 - Massachusetts Institute of Technology
 - Harvard University, Cambridge, Massachusetts
 - University of Sao Paulo (USP)
 - Michigan State University
 - University of California
 - Federal University of Rio de Janeiro (UFRJ)
 - Nuevo Leon Autonomous University
 - Carleton University
 - Royal Military College of Canada
