

## 2020 Announcement of World Congress and Expo on Cell and Stem Cell Research, March 16-17, 2020 | Chicago, USA

**Diana Anderson**

Professor of Biomedical Sciences, University of Bradford

Bradford, E-mail- [D.Anderson1@bradford.ac.uk](mailto:D.Anderson1@bradford.ac.uk)

### Conference

The world best platform for all the researchers to showcase their research work through Oral/Poster presentations in front of the international audience, provided with additional opportunities for expanding their research work by conducting workshops and by exhibiting products. Cells and Stem Cell Conference famously known as Stem Cell 2020 Chicago.

It gives you the global exposure and helps to associate with the present and potential researchers who discover novel techniques through stem cells and its applications with This meet enlightens the latest treatment advancements in Cell & Stem Cell Research around the globe who concentrates on growth about ongoing advances like first stage analysis treatment etc. This is the best chance to achieve the biggest array of members.

This conference invites Cell biology and Stem cell researchers, Oncologists, Academicians, Physicians, Academic scientists, Radiologists, Chemo therapists, Industry professionals, Head of the departments, Directors, Clinical Professionals, Young researchers, Postgraduates, Trainees and all stem cell Researchers. It also gives the best opportunity to the Business professionals to represent their company.

### About Venue:

Chicago was unremarkable: a little settlement at the mouth of the Chicago River close to the southern tip of Lake Michigan. Surely, a typical thought for the source of the city's name is an Algonquian word for a wild leek (or onion) plant that developed locally. In any case, Chicago's area at the southwestern finish of the huge Great Lakes framework couldn't have been increasingly perfect as the nation

extended westbound in the nineteenth century, and maybe this is reflected in another translation of the Native American term as signifying "solid" or "extraordinary." Regardless of which determination is right, it was before long perceived that the Chicago River shaped a basic connection in the incredible conduit that emerged mid-century between the Atlantic Ocean and the Mississippi River. With the ascent of railroads before long, the youthful city turned into the nation's railroad center point, which expanded the city's quickly becoming mechanical base. Chicago proceeded as America's junction with the hazardous development of air travel after World War II, which slipped the city's progress into a post industrial economy.
