

## 2020 Conference Announcement on Materials Chemistry

**Dr. Alireza Heidari**

*Professor, Bio Spectroscopy Core Research Laboratory, California South University (CSU), Irvine, California, USA, E-mail: scholar.researcher.scientist@gmail.com*

[Material Chemistry Conferences](#) welcome chemical professionals, researchers, professors, scientific communities, delegates, students, business professionals and executives from all over the world to attend the “[19th World Congress on Material Chemistry and Material science](#) during [November 23-24, 2020](#) in [Singapore City](#), Singapore with the theme “[Advanced Technologies In Material Chemistry](#)”. Material Chemistry 2020 aims to proclaim knowledge and share new ideas amongst the professionals, industrialists, and students from research areas of Materials Science, Chemistry and Physics to share their research experiences and indulge in interactive discussions and technical sessions at the event. The Conference will also have a space for companies and institutions to present their services, products, innovations and research results. [Material Chemistry 2020](#) is a 2-day program that offers exhibition at the venue to display new and emerging technologies and has extensive sessions in which the main Keynote presentation, YRF (student presentation), Oral, Posters, E-poster presentations. To share their valuable presentation on the most recent and advanced techniques, development and latest updates, a world-renowned speaker and prominent representative representatives from all over the world participate in the conference.

Material Chemistry conference area unit organize as a result of several edges of smart materials depend upon the actual fact that it's doable to tailor the structures of materials at extraordinarily tiny scales to attain specific properties, so greatly extending the materials science toolkit. Exploitation technology, materials will effectively be created stronger, lighter, a lot of sturdy, a lot of reactive, a lot of sieve-like, or higher electrical conductors, among several alternative traits. Several everyday business product area unit presently on the market and in daily use that have confidence sensible materials and processes.

As the demand for sustainable materials is increasing in all streams of technology with non-renewable materials depleting, the innovations in Material chemistry plays a crucial role in day to day life. In 2050, there will be nearly 9.8 billion human beings on the planet. With this exponential growth, it has bad effects on herbal resources; with the demand of population it is necessary for the improvement of new materials. Material Chemistry is the fast-growing field in both research and industrial sectors. Materials Chemistry Conference gives the basic ideas related to the innovation of new materials and technologies for sustainability. The field of Materials Chemistry involves a wide range of sectors of markets growing respectively like Engineering Resins, Polymer Alloys and blends, advanced batteries and fuel cells and so on.

Our goal is to bring together bright minds to give talks that are idea-focused, and on a wide range of subjects, to foster learning, inspiration and wonder – and provoke conversations that matter. Based on your expertise, we welcome you to participate at the prestigious event as a Plenary Speaker. We have developed a global platform for the eminent scientific professionals, students and industry delegates universally to present their newest research findings to the global area. We wish you could join us and share your research experience. It would be ideal if you advise us your acknowledgment and accessibility for this forthcoming gathering.
