Introduction

Endocrine glands are ductless glands of the endocrine device that secrete their products, hormones, directly into the blood. The most important glands of the endocrine device consist of the pineal gland, pituitary gland, pancreas, ovaries, testes, thyroid gland, parathyroid gland, hypothalamus and adrenal glands. The hypothalamus and pituitary glands are neuroendocrine organs.

The endocrine device is made up of the endocrine glands that secrete hormones. despite the fact that there are 8 predominant endocrine glands scattered during the frame, they may be nonetheless considered to be one gadget due to the fact they have got similar functions, similar mechanisms of affect, and many crucial interrelationships.

Some glands also have non-endocrine regions which have capabilities other than hormone secretion. as an instance, the pancreas has a major exocrine portion that secretes digestive enzymes and an endocrine component that secretes hormones. The ovaries and testes secrete hormones and additionally produce the ova and sperm. a few organs, inclusive of the belly, intestines, and coronary heart, produce hormones, however their number one feature isn't hormone secretion.

You may say endocrine (say: EN-doh-krin) glands are a little bossy — they tell your cells what to do! but this is really an amazing issue. without your endocrine glands — and the hormones they release — your cells would not know whilst to do essential matters.

As an instance, your bones wouldn't get the message that it's time that allows you to develop and get bigger. And your frame would not realize that it is time to start puberty, the frame adjustments that flip kids into grownups.

You have got a variety of endocrine glands in distinctive sizes and shapes positioned in different elements of the frame. You might be amazed to research that the pituitary (say: pih-TOO-uh-ter-ee) gland, which is about the dimensions of a pea, is the "master gland" of the endocrine system. It makes and releases a group of hormones that manage different glands and frame capabilities. Tiny and tucked below your mind, the pituitary helps you grow large via producing growth hormone.

Your thyroid (say: THY-rod) gland is on your neck and it's formed like a bowtie or a butterfly. It makes hormones which are vital for increase and it facilitates you live alert and complete of power.

Your adrenal (say: uh-DREE-null) glands are in reality critical for your body in times of problem, like when you're unwell or underneath pressure. Adrenaline (say: uh-DREN-uh-lin), one of the adrenal gland hormones, gives you the raise you want in case you're being chased with the aid of a wild animal — or maybe your brother!.

Your pancreas (say: PAN-knee-us) is your biggest endocrine gland and it is determined in your belly. The pancreas makes several hormones, including insulin (say: IN-suh-lin), which facilitates glucose (say: GLOO-kose), the sugar this is for your blood, enter the cells of your frame. Your cells need to be fueled with glucose to function, like a automobile's engine needs gasoline. And all of us recognize what takes place while you run out of gas!

Your frame does an top notch task of ensuring that hormones are launched in just the proper amounts at simply the proper time. If there is a problem with the endocrine machine, someone's body might not develop find it irresistible need to or it might not work the way it's imagined to.

Diabetes (say: dye-uh-BEE-tees) is one not unusual hassle with the endocrine device. It takes place when a person's pancreas does not make sufficient insulin. it's also an endocrine problem if a kid isn't always growing as speedy as predicted because his or her pituitary gland isn't always making enough increase hormone.

Thankfully, special docs known as endocrinologists (say: en-duh-krih-NOL-eh-jists) know lots approximately the endocrine device and can assist treat human beings with hormone troubles. however maximum kids will by no means need to fear approximately their endocrine device because it works nice on its own. How does that make a kid experience? Gland-tastic!
