

## Classification of complications of Injectables and treatment guide lines

**Sabreen Al Zamil**

*Sabreen Al Zamil clinic, Kuwait*

### Abstract:

The subject of this talk is to introduce a new classification of injectables in addition to classification of the complications of them with treatment guide lines. A safe filler should be Bio compatible, on allergic, Non carcinogenic and stimulates Less inflammatory response. There are previous classifications of fillers such as temporary vs. permanent, animal vs. non animal origin and autologous vs. non autologous .However this presentation advocated a peculiar design not introduced before as to classify the complications based on three important factors; Personnel's being experienced and licensed vs. others, places being cosmetic clinics vs. others and materials being natural vs. synthetic, licensed vs. Unlicensed or banned with examples on each and finally the different complications how to treat and avoid.
