Conference Announcement

2nd International Conference on Artificial Intelligence will be held during June 22-23, 2020 at Venice, Italy. This Conference will unite Computer Engineers, driving analysts, researchers and scientists in the area of interest from all over the world. This would provide a platform to discussion and exchange of ideas and experiences, and exploration of future research avenues in various fields of Artificial Intelligence.

Multimedia Block chain & Artificial Intelligence Technologies are changing the world and it can bring new capabilities to everything from smarter factories to drones to sports to health care and to driverless cars. The block chain and AI are two cornerstones of the new computing movement. In every industry technology and its application significantly change existing business models whereas at the same time making new ones.

Being a pioneer in this field, Meetings International in producing top notch conferences, meetings, workshops and symposia in all major fields of science, engineering and medicine. Meetings Int. has been associated with national and international associations, Universities, Industries, and high-level individuals, dedicated to hosting world-class conferences and events. The key objective of Meetings Int. is to provide the communication between science and engineering research among the Academic and Industrial Community.

Artificial intelligence (AI), the ability of a virtual computer or laptop-controlled robotic to perform duties usually related to smart beings. This is often carried out to the task of growing structures endowed with the highbrow methods characteristic of human beings, together with the potential to purpose, find out that means, generalize and so forth. There are numerous kinds of mastering as implemented to artificial intelligence. The handiest is learning by way of trial and mistakes. This easy memorizing of man or woman objects and methods referred to as rote getting to know is rather clean to enforce on a laptop. Some industry experts believe the term artificial intelligence is too closely linked to popular culture. People understand that AI will simply improve products and services not replace the humans that use them.

We cordially invite all the participants who are interested to share their innovative ideas and research in the arena of the history, crypto currency, new technologies, and Multimedia Cloud and Big Data, Artificial Intelligence for Business, intelligence, Block chain technology, animation and Human Computer Interaction and Visualization professionals, researches and academic communities worldwide.

We are sure that the 2nd International Conference on Artificial Intelligence will be a unique opportunity for n

networking, get pleasure from a prime quality scientific program in the form of oral & poster presentation, workshops, symposiums, tutorial & panel discussion.

• Why to attend?

Attending an appropriate conference at an appropriate time may sometimes lead to the great end of the line. The benefits are as follows:

- To have great interactions with the successful Entrepreneurs
- Discuss the latest trends in the Business Management
- Can know the aye and nay of starting a business
- Meet the Bigwigs of different business
- Facilitate the Knowledge Exchange
- To have a chat with the co-businessmen around the world
- Collaborations between the industries and academics
