

Current Update in Journal of Nanomaterials & Molecular Nanotechnology

Adina Campbell*

Editorial

On behalf of the Board of Journal of Nanomaterials & Molecular Nanotechnology survey and co-editors, I am glad to present Volume 10, Issue 5 of the journal. It is an open-access peer-review journal in the field of nanomaterials and molecular nanotechnology. Journal of Nanomaterials & Molecular Nanotechnology survey (JNMN) is having International Standard Serial Number (ISSN): 2324-8777.

With the cooperation of the senior and associate editors, we have created a set of practices and an environment that encourages the delivery of quality reviews in a timely fashion. These policies include the Expedited reviews. Manuscripts are reviewed at the editor-in-chief, senior editor, and associate editor levels before being sent out to reviewers. At any of these stages, an editor may reject the manuscript or send it back to the author for improvement. This gets a response to the authors much more quickly and preserves reviewing resources for other manuscripts. In the case of immediate revision, authors are given a chance to provide an enhanced manuscript to the eventual reviewers, thus increasing the odds of acceptance. Associate editors complete a short evaluation for each reviewer on each manuscript. This process reminds reviewers that they are responsible for timely, high-quality reviews and also serves to help identify future associate editor candidates.

All scientific manuscripts including editorials are subjected to the peer-review process. At many instances members of the editorial board also prefer to submit their articles. In fact, JNMN encourages editorial board members to actively contribute. However, no special privileges are given to anyone.

Journal of Nanomaterials & Molecular Nanotechnology follows a double blind peer review process where identity of authors and reviewers is not revealed to each other. The review generally involves two to six subject experts. The editorial team consisting of associate editors and assistant editors are involved in the entire article cycle starting from submission to final recommendation. The entire review process is carefully structured so as to minimize possibility of errors.

Journal of Nanomaterials & Molecular Nanotechnology survey functions on principles of scientific excellence, publication ethics and transparency. It makes the authors easy to submit their articles through the online manuscript submission and review system managed by JNMN as the publisher. Journal follows strict guidelines related to

publication ethics and conflict of interests.

Main aims and objectives of this journal is to publish more and more quality articles of research, review, short commentary, mini reviews, case reports etc which will be very useful for the readers. We would like publish more articles related to Journal of Nanomaterials & Molecular Nanotechnology focuses on the topics that include:

- Nanoscience and Nanotechnology
- Nanomaterials
- Types, Design, Synthesis & Characterization of Nanostructured Materials
- Current Research Advancements
- Potential applications of Nanomaterials /Nanotechnology
- Global Market
- Molecular Nanotechnology
- Nanodevices and Nanosensors
- Nanoelectronics
- Nanomedicine
- Nanofabrication Techniques
- Nanotoxicity
- Nanobiotechnology
- Pharmaceutical Nanotechnology
- Commercial Aspects- Nanotechnology Market

Average download per article is increasing and all these are promising signs. Now we are in this stage only through the continuous support of Editorial Board Members and intellectual generosity of the readers and contributors (authors and reviewers).

In future we would like to publish more quality articles related to recent advancements and the modern technologies that show good process in the computer science and engineering. This will be very useful for future creative and innovative technologies.

With the support of authors, Editorial board members, reviewers and readers of Journal of Nanomaterials & Molecular Nanotechnology survey became very successful with good number of quality articles and will reach good heights with this continuous support. Thanks to all the reviewers and editors whose cooperation and hard work made this possible. JNMN publishes up-to-date, high-quality and original research papers alongside relevant and insightful reviews. This journal is always integrative and challenging with latest updates in computer science and engineering.
