

Gain deeper insights on concepts of Toxicology and Pharmacology

Amy Reisinger

CEO/Toxicologist SteelFusion Clinical Toxicology Laboratories, Philadelphia, USA

Keeping in mind the success of the 2nd World Congress on Toxicology and Applied Pharmacology and its previous edition and the huge foundation laid by Toxicology Series. We proudly announce that the 3rd World Congress on Toxicology and Applied Pharmacology will be held in Barcelona, Spain on Feb 5- Feb 6 2021. The Conference will provide a Global Platform for Young Researchers, Scientists to present their valuable researches in the futuristic Oriented Platform provided to them.

We hope for a grand venture that is packed up with exemplary experts and passionate pioneers in the field of toxicology and pharmacology, who would be sharing their expertise to the audience comprising of toxicology and pharmacology professionals, professors, students, delegates and research enthusiasts.

The Toxicology Conference is a combination of various streams as environmental toxicology, clinical toxicology, toxinology, regulatory toxicology, pharmacotherapeutics, drug discovery, ethno pharmacology etc aimed to carve the minds of the attendees with the advancements in every aspect of the vast and vivid fields of toxicology and pharmacology. Strengthen your global ties with the renowned researchers and internationally acclaimed toxicologists and exploit this spotlight on your

comes from them. The conference will provide a unique opportunity for young researchers as well to come up with enhancing their future as the Conference will consist of Doctors and scientists who can make the future of these young researchers to enhance to a never ever state.

The Conference makes sure that no corner of the world is left uncovered so each and every individual from every corner of the world as it will make sure of our goal to unite the world in the field of research as the research will be useful not only for a particular area but for the whole world.

In the recent time the world has witnessed a huge development in the medicinal field and the enhancement in many technologies to cure the diseases but still the world is fearsome with certain toxins the body generates on its own or the body gets from any external source. Toxins effect a lot in the day to day life as it doesn't have a huge impact on the body that will make it visible for the effected individual to notice but the effect if not cured will be life threatening. Every single day with a single moment in the human body makes it vulnerable for it to get effected to toxins. Toxins are nothing but is a poisonous substance produced within living cells or organisms; synthetic toxicants created by artificial processes are thus excluded. This leads the toxins in the body to grow rapidly and the effect of it is life threatening if not cured on time. The toxin are generated by the body itself or by some external artificial factors that effects the body. The effect of toxin differ from type to
