

Hair care, Therapies and Transplantation

Reshma Rathod,

Cosmetologist at Dr twacha laser for hair skin anti aging India

Abstract:

Hair Care:

As in today's world fastest growing problem in all over the world is which is faced by all generation, gender is ALOPECIA. Out of which most commonly facing is ANDROGENIC ALOPECIA (AGA) which can be treated if diagnosed early. AGA happen due to deminutarization of hair root in fronto vertex region of scalp due to dyhydrotestosterone hormone which start secreting in the body at the time of puberty. If a person carry weak hair genes then it can start as result of deminutarization of hair root which is getting aggravated at very early age due to very stress full life style.

And other type of hair related problem which are also growing very fast are Alopecia Areata, Scarring alopecia, Anagen and telogen effluvium.

Alopecia which are of 3 type are alopecia areata, alopecia universalis, alopecia totalis, these are totally stress induced which is also due to Autoimmune disorder.

Scarring alopecia which is also known as Cicatrice alopecia in this hair follicle are totally gets destroyed.

Anagen and Telogen Effluvium is caused due to diffuse hair loss (DHL)it usually happens due any prolong illness, due to sever defiancess of any nutrition , etc.

There are other alopecia such as Traction alopecia, Trichotillomania

Therapies and treatment

There are lots of treatment are coming up now a day which are effective too extend sch a PRP, stem cell de-

rivative, some internal treatments with some Finasteride groups drug and nutrition supplements.

Transplantation,

It Is one of the option In which alopecia can be camouflage by operative which is also know as by FUE (follicular unit extract) which is very successful.
