

Market Analysis

International Conference on Critical Care and Emergency Medicine

Hamid Yahya Husain

Editor-in-Chief, Professor, Health Affairs Department, Dubai Health Authority, UAE, E-mail: Hussainh569@gmail.com

Critical care is present focus of research in medicinal research. Critical Care is also known as intensive care. Critical care isn't characterized by location; however it might be practiced in an assortment of settings including hospital-based facility, emergency care centres, medical prescription units, emergency vehicles, or by means of telemedicine. Emergency prescription experts give valuable clinical and leadership services to the emergency department. For the care and treatment of acutely ill or injured patients who need immediate medical attention, emergency medicine act as a therapeutic claim. This Research report analyses present and future strategies within various segments of the emergency medical services & ambulance market such as transportation equipment, blood and haemorrhage control devices, equipment used for burn care, diagnostics and infection control equipment, and cardiac, respiratory and hypothermia equipment. It also analyses each market segment and its applications, regulatory environment, technology, market projections and market shares.

Scope and importance:

Critical care depends on the knowledge and aptitudes to diagnose disease and injury. The patients of all age groups can be affected in an acute phase. Emergency physicians treat a large number of patients and decide according to their conditions in most of the modern emergency departments. This has a wide scope with no boundaries of organ, system or disease pattern. Emergency medicine shares with family medicine the uniqueness of seeing all patients regardless of age, gender or any specifications.

The scope study of this report includes a key market analysis, market drivers, industry constraints, competitive developments and market trends. Research analyses each market segment and its applications, regulatory environment, technology, market projections and market shares. A complete geographical analysis of the market is also presented in the report. The emerging market for emergency medicine and ambulatory includes countries such as India, China, Japan, Korea, Taiwan, Canada, Africa, Australia and New Zealand. Profiles of key market players are also covered in this report.

Dubai is a global city and business hub of the Middle East. It is a city known for luxury shopping, ultramodern architecture and a lively nightlife scene. It attracts the world's attention through large construction projects and sports events, in particular the world's tallest buildings. Dubai's population has consistently grown by five percent over the past year. However, what might come as a surprise

to many people is that a little over three-quarters of Abu Dhabi's population is male.

Dubai has many blissful Research Institutes and Medical Centers for the welfare of the being. Research Institutes and Medical Centres at Dubai, UAE acknowledges the strength and clinical aspects of Research and Development in the Field of Medicine.

Dubai Harvard Foundation for Medical Research, UAE attracts the best training, research, and health care practices to Dubai, the Gulf and Middle East Region. The scope for research is broad, and will take full advantage of the extensive global network of expert faculty, researchers and educators at Harvard Medical School, Harvard University and other counterparts in the Middle East.
