

Market Analysis on Psychiatry 2020

After the successful completion of the Psychiatry conference series, we are pleased to welcome you to the “World Summit on Psychiatry.” The congress is scheduled to take place on Nov 09-10, 2020 in the beautiful city of Paris, France. This Psychiatry 2020 Conference will give you exemplary experience and great insights in the field of research.

According to this research report, the global market for Psychiatry is projected to show a robust growth of 6.5 per cent in the CAGR during 2019-2024.

Psychiatry is the branch of medicine focused on the diagnosis, treatment and prevention of mental, emotional and behavioral disorders. A psychiatrist is a medical doctor (an M.D. or D.O.) who specializes in mental health, including substance use disorders. People seek psychiatric help for many reasons.

One in four individual in the globe will be affected by mental disorders at some point in their lives. About 450 million people currently suffer from such conditions, placing mental disorders among the leading causes of ill health worldwide. Treatments are available, but nearly two-thirds of people with a known mental disorder never seek out help from a professional. Stigma, discrimination and neglect prevent care and treatment from reaching people with mental disorders, says the World Health Organization (WHO). Where there is neglect, there is little or no understanding. Where there is no understanding, there is neglect. So it is really necessary to have a brush up on this topic.

Countries which have most impact on Mental Health:

Although mental health affects many people around the world, there is often not adequate provision for those suffering from it

In countries such as Tajikistan and Ghana, mental health spending is lower than \$2 (£1.30) per capita compared with \$330 in Sweden.

However, it is not just about spending. Figures released by WHO show that many of the countries most affected by mental health are not among the world's poorest.

The graph shown below clearly shows the percentage of people who suffer from different mental disorders in each age groups.

Anxiety disorders happen when a person has severe dread or fear of a situation, the situation depends on the type of anxiety disorder the person has.

Affective disorders are otherwise known as mood disorders - Bipolar disorder, depression, OCD, PTSD schizoaffective disorders and more.

Substance use disorders- when people experience severe changes in their behaviour due to use or overuse of some substances
