

One Health perspective in a changing world: what is our role and connection with infectious diseases and what is going to happen in our near future

Gajardo Tulio

Centro de Investigación Aplicada de Chile

Abstract

We have been living in a globalized world for years, but still we are not really connected. The link between human, animal and environmental health today more than ever before becomes the key pillar to ensure our future survival and coexistence, where multidisciplinary responsibility based on the correct education of the population results in the central axis of all our change as a society.

Biography

Veterinary Doctor of the University Andrés Bello, Master in Zoonoses and One Health of the Autonomous University of Barcelona, Diploma in Quality Assurance and Food Safety of the University of Chile, Diploma in Emerging and Re-Emerging Diseases of the University of Chile.
