

Why Do Patients With Mental Psychiatric Disorders Have More Probability Of Acquiring Hospital Infection?

Huang Wei Ling

Medical Acupuncture and Pain Management Clinic, Brazil

Abstract

Introduction: Generalized anxiety disorder (GAD) accounts for 8% of primary-care visits in the United States and has a lifetime prevalence of 18%. At any given time, 13% of the elderly population and 10% of younger adults are being treated with antidepressant medications. Lifetime prevalence for major depressive disorder is 16.5%, in the United States of America. When looking through ancient medical perspectives, it is possible to see that these disorders are linked to systemic energy imbalances.

Purpose: To demonstrate that the energy imbalances (Yin, Yang, Qi, Blood and Heat retention) that are leading to psychiatric disorders are the same energy imbalances that increase the probability of acquiring hospital infections.

Methods: Literature review and analysis of different studies regarding the emotions and mental psychiatric disorders, as well as the formation of hospital infections both in ancient medical traditions and Western Medicine.

Results: The energy imbalances that are leading to the psychiatric disorders can end up as the consequences of the formation of Heat retention that is the same energy imbalance that can lead to the formation of the hospital infections, in an energy point of view.

Conclusion: The conclusion of this study is that patients with psychiatric disorders, mostly when in taking high-concentrated medications have an increase tendency to develop hospital infection when admitted in the hospital, because the energy imbalances, leading to the mental health pathologies are the same energy imbalances that ease the process of acquiring hospital infections, in the energy point of view.

Biography

Huang Wei Ling, born in Taiwan, raised and graduated in medicine in Brazil, Specialist in infectious and parasitic diseases, a General Practitioner and parenteral and enteral Medical Nutrition Therapist. Once in-charge of the Hospital Infection Control Service of the City of Franca's General Hospital, she was responsible for the control of all prescribed antimicrobial medication and received an award for the best paper presented at the Brazilian Hospital Infection Control Congress in 1998. Since 1997, she has been presenting her work worldwide, working with the approach and treatment of all diseases of all systems of the human body in a holistic way, with treatment guided through the teachings of traditional Chinese medicine and Hippocrates.
